

User Guide – TP Keyboard (TradingView)

1. Initial Setup

1. Connect the trading keyboard to your PC using the included cable.
2. Open **TradingView** and start with **Paper Trading** to test the setup safely.
3. Right-click on the chart → **Settings** → **Trading** → enable **One-Click Trading**.

 **One-Click Trading must be enabled for the keyboard to execute trades.**

2. Supported Buttons on TradingView

On TradingView, **5 buttons** are active.

The remaining **2 buttons** (CLOSE & CANCEL) are **MT5-only** and are not used on TradingView.

3. Button Functions

SELL

- Opens a **Short position** at market price using the predefined position size.
- If a **Long position** is already open, pressing **SELL** will **close it**.

BUY

- Opens a **Long position** at market price using the predefined position size.
- If a **Short position** is already open, pressing **BUY** will **close it**.

LIMIT

- Opens the **Order Panel**.

MARKET

- Opens the **DOM (Depth of Market)** panel.

4. Knob (Rotary Encoder)

- Rotate left/right: **Zoom Out / Zoom In**
- Press the knob: **ENTER**

Customization (Optional)

You can customize your keys using our **TP Key Customization Tool**, which is available in the same email where you received these instructions.

We also recommend checking TradingView's built-in hotkey settings to see what functions are supported. Using our customization tool, you can map and optimize your keys to make them more functional and better suited to your trading workflow.

Important Notes

- The trading keyboard executes actions exactly as configured in TradingView.
- Position size, order type, and risk settings are controlled inside TradingView.

Safety Notice

- One-Click Trading executes orders instantly.
- Always test the keyboard using **Paper Trading** before live trading.

Troubleshooting

If the keyboard does NOT respond:

- Make sure **One-Click Trading** is enabled
- Click once on the chart to ensure TradingView is focused
- Verify that Paper Trading or a broker is connected
